SPECIALITY CHEMICALS  
AND SEALANTS

**TeknoSeal**

**The Technology advantage!**

Teknoseal Engineering Solutions, a leading supplier of high quality impregnation technology, delivers efficient and cost effective solutions for sealing porosities in components.

The Teknoseal advantage is a confluence of experience expertise, vision, excellence and professionalism, with decades of extensive knowledge in impregnation technology development.

Top class technology, high quality standards and reliable reproducible processes, representing excellent value For money are the pillars on which our manufacturing technology stands tall. Teknoseal has strategic partnerships with several automotive manufacturer and is an important member of the global supply chain in a wide variety of engineering and manufacturing industries.

We at Teknoseal deliver the most advanced and environmentally friendly technology in impregnation systems and solutions. We aim at the highest level of customer satisfaction and achieve it with passion and commitment.

**.....Seals better forever!!**

Teknoseal sealants are used in diverse applications, the most common being sealing micro porosities in casting against leakage of air, gases and fluids. They are also used to seal powder metal components to reduce tool chatter during machining and as a pre treatment process prior to finishes like conversion coating, plating powder coating, wet painting, anodizing, chromating etc.

Teknoseal Sealants seal the voids within electronic components such as connectors, sealing inserts into assemblies, over moulded components and wire harnesses. They are engineered to penetrate the voids between the metal leads / wires and the moulded plastic, producing a complete seal, resulting in dramatically improved yields and productivity as compared to the traditional methods of potting.

**Trust Teknoseal for superior quality and enduring results!**
